Due to our growing needs we are currently looking for

Product Owner

Location: Wrocław, Poland

Day in the life of a "Product Owner"

In the role of a product owner at Fluke you will be working a variety of people such as a team of highly skilled engineers that work on your product, other teams and product owners, product management teams as well as stakeholders. Alongside your team, you will be monitoring progress and changes made using SCRUM framework as well as a framework that is customer focused in ensuring we deliver value to customer by means of collaborative approaches. Some tasks you'll be working on is documentation of business requirements and execution of associated business processes/workflows in support of product initiatives. Knowledge transfer is an essential part of the role, as it is important the product owner understands how the product works and how it's all reflected in the application and system of the product.

Job Description

- Translating the business requirements into user stories targeting internal IT teams and other stake holders (Dev, QA, Ops, Support Desk, connectivity, etc.) including the creation of clear use cases or user stories based on business requirements.
- Critically evaluate information gathered from multiple sources, reconcile conflicts, decompose high-level information into details, abstract up from low-level information to a general understanding, and distinguish user requests from the underlying true needs.
- Work with engineering to document and clarify impact assessments and Review impact assessments or information with the Business Product Manager / Engineering teams
- Work with engineering and QA teams to facilitate knowledge transfer or requirements for effective coding and testing.
- Assist in coordinating appropriate levels of product training and information for all supporting operational groups.
- Assist in creation of training materials, marketing materials, and support documentation and provide support in creation of presentation materials or research as directed.
- Develop and document metrics for quantifying associated business value for assigned projects.
- Act as the first point of contact for any questions or queries relating to product features or business requirements. Escalate to Business product manager as required.

We Offer

- You'll be able to have direct impact on the product developed, working closely with customers to make sure we can create and manufacture the best products for their needs
- A creative and upbeat environment where you can put your problem solving skills to work alongside our highly skilled teams
- An environment where you will be able to learn and grow in and from every direction. With many perspectives being taken account, such as the company's, the customer's and the engineer's there is always an opportunity to learn more and grow within and beyond the role
- An environment that promotes a healthy work place with amenities such as bike parking, a modern office with a recreation room, showers, standing desks, multisport card and private healthcare

Your team

The team is composed of back and front end developers, quality assurance engineers, testers and scrum master from all over the world, as well as located in different parts of the world as well. The opportunity to work on this team includes being able to create and promote a positive, innovative and social environment, and when allowed by Covid-19 policy, social gatherings are often held.

Education

Bachelor or master degree in computer science or mechanical engineering

We kindly inform you that we will contact selected candidates.
